GENESIS MEDICUS CLINICAL CAMPUS AT A GLANCE

Senior Director of Student Academic & Clinical Affairs
SOUTHERN CALIFORNIA- Emily Cardenas

Assistant VP of Student Academic and Clinical Affairs
NORTHERN CALIFORNIA- Maricres Santa Ana

Undergraduate Medical Education (UME)

Since 2009, Genesis Medicus Clinical Campus (GM-CC) has been a driving force in implementing (UME) clinical rotation programs for 3rd and 4th year international medical students. This program provides implementation and management services for new and existing ACGME or AOA accredited programs for Undergraduate Medical Education (UME).

The GM Clinical Campus model offers students the ability to complete all 3rd year Cores and 4th year Electives and Sub-I's in a single geographic location and often at a single-site. The Genesis Medicus model enhances the experience for learners. As such it offers our client schools a clinical campus which acts as an extension of the schools stateside.

Our clinical campus model offers a comprehensive program providing student clerkship rotations in all the required subject cores: Family Medicine, Pediatrics, Obstetrics and Gynecology, General Surgery, Internal Medicine, and Psychiatry. Based on the breadth of our offering, international schools of medicine (ISOM) have entrusted our program to secure new affiliations and sites that we manage on their behalf.

Our preceptor model offers students high quality, personalized mentoring under the leadership of our proprietary Teaching Faculty Network (TFN). The program has proven to deliver impressive USMLE pass rates, an accomplished network of alumni, and strong partnerships with residency placement sites across the United States.

- The school's curriculum is equivalent to that of U.S. medical schools. Upon completion of the required science courses in the 1st two years, students will complete 3rd and 4th years, learning clinical skills at affiliated teaching hospitals and other clinical sites in the United States.
- The program includes a strong research component in which students participate in several projects with attendings, residents, and fellows on subjects ranging from Asthma to Pharmacogenetics, etc.
- All students are eligible to sit for the (USMLE) United States Medical Licensing Examination and if qualified, obtain residency.
- GMCC Clients are accredited by the National Committee on Foreign Medical Education and Accreditation (NCFMEA, DOE), Accreditation Commission on Colleges of Medicine (ACCM), Nederlands-Vlaamse Accreditatie Organisati (NVAO) Caribbean Accreditation Authority for Education in Medicine and other Health Professions (CAAM-HP) and the Grenada Medical and Dental Council (GMDC).
- We also engage our GME Affiliates to ensure that there is additional monitoring to ensure quality and established practices like those followed by domestic medical schools.

Faculty

- GMCC has established one of the largest Teaching Faculty Networks (TFN) in the industry, consisting of specialists and sub-specialists with successful, thriving practices throughout our operating markets. Our faculty has been trained at some of the finest medical institutions in the world.
- Our TFN is made up of committed teachers, scientists, scholars and physicians who hold M.D., D.O., or a MD-PhD. and represent diverse backgrounds in medical research and clinical practice.
- Our faculty are board certified in their area of specialty. Some of our faculty have the distinguished recognition of being double or triple board-certified.

Residency Preparation

- All students take the USMLE examinations, similar to that of medical students from Domestic LCME accredited schools in the United States.
- Our pass rates are competitive and in some cases, exceed that of U.S. medical schools.
- Upon graduation, our students successfully obtain residency appointments at highly regarded programs.

Genesis Medicus Student Profile

Our program attracts students with diverse backgrounds and high aptitudes for academic success. Our clients allow for us to be involved in the selection of all incoming cohorts.

- 76% U.S. Citizens, 19% Canadian Citizens, 3% Permanent Residents, 2% International
- 55% Female students
- 45% Male students
- 88% Bachelor's degree
- 10% Master's degree
- 2% Doctorate degree
- Average Cumulative GPA: 3.3 (3.26)
- Average Science GPA: 3.1 (3.07)
- We select students who want to remain in the community they train.
- We select students who want to pursue primary care.

Clinical Training

All students have the option to choose between clinical sites available in the United States. It is during their clinical rotations in which students apply their medical science coursework knowledge and experience, and will likely discover the area of medicine in which they are most passionate.

An Overview...

Once students have completed their 1st and 2nd year of basic science coursework, and passed their USMLE Step 1 exam, they then begin their 3rd and 4th year of medical education in which they undergo a series of clinical rotations within our program. The program is 72-weeks in length and clerkships will be scheduled at one or more hospitals throughout our affiliate and accredited teaching affiliates, or teaching hospital system networks across the United States.

Clinical clerkships are divided into Core Rotations and Elective/Sub-I's Rotations. Core rotations are the foundation of a student's clinical education. Elective rotations are medical sub-specialties under each of the main Core Rotations in which students choose their objectives according to their preferred area of anticipated postgraduate residency training.

() In some states Family Medicine is a required subject core, allowing for students to conduct all their rotation under the FM umbrella if the preceptor-ship remains core specific.*

Preparation...

The Introduction to Clinical Medicine (ICM) is a course in which all students participate during their second through fifth semester in Medical Sciences. This course will engender the clinical skills necessary for clinical clerkships and professional development. Students are equipped with the knowledge and skills to perform the following:

- Complete histories and conduct physical examinations
- Formulate an assessment and plan for the care of patients
- Conduct library and computer search of relevant information for patient care
- Commit to active participation in research projects along side fellows and residents

Students are introduced to the clinical medical information necessary for their 3rd and 4th year rotations. This will be done in a problem-based learning format, stressing a review of the medical sciences, the development of case-centered learning goals, and the introduction of a series of core medical conditions. In addition, Behavioral Medicine will be fully integrated into the courses, as well as weekly didactics and simulation sessions which focus on teaching and developing required Clinical Knowledge (CK), which are key components for the USMLE Step 2 Exam.

CLINICAL CORE ROTATIONS

Clinical core rotations are full-time clerkships completed within 42 to 48 weeks (depending on the state and school) whereby students evaluate patients in a clinical setting. Students have the opportunity to utilize skills and information previously acquired in the medical sciences and ICM courses. As active team members of the student and house staff, all students are supervised by attending physicians as they evaluate laboratory data, diagnose patients, and discuss treatment options.

Each student's clinical supervisor evaluates the student's performance according to standards set by the schools.

**Students are covered by the school's Professional Liability (malpractice insurance) for the duration of their rotation. Each affiliate teaching site is issued a certificate of insurance deeming students, clinical sites, and faculties as additional insured.*

Required Subject Core Rotations:

- Internal Medicine (12 weeks)
- Surgery (12 weeks)
- Pediatrics (6 weeks)
- Obstetrics and Gynecology (6 weeks)
- Psychiatry (6 weeks)

ELECTIVE ROTATIONS

Elective Rotations are an integral part of the student's clinical experience to which students are exposed to an array of specialties to consider for their future medical careers. Students complete 36-weeks of electives, including the optional, yet highly recommended, 4-weeks of Neurology, and 4-weeks of Family Medicine.

Popular subspecialties include:

Medical

Allergy and Immunology
Ambulatory Care
Cardiology
Critical Care
Dermatology
Emergency Medicine
Endocrinology and Metabolism
Family Practice
Gastroenterology
Gerontology
Infectious Diseases
Nephrology
Neurology
Oncology
Ophthalmology

GM-CC Students Placed by Category

Clients Statistics:

941 US RESIDENCIES IN 2018 - With more than 941 US residencies in 2018, no other medical school in the world provides more new doctors to the US healthcare system.

#1 PROVIDER OF DOCTORS - We are the number one provider of doctors into first-year US residencies for the last eight years combined.

46 US STATES - **Client schools** students obtained residencies in programs across 46 US states and the District of Columbia.

16 MEDICAL SPECIALTIES - students matched in **20** different specialties such as Internal Medicine, Family Medicine, Anesthesiology, Emergency Medicine, Neurology, Pathology, Physical Medicine and Rehabilitation, Surgery, and Urology.

93% OBTAINED POSTGRAD POSITIONS - Of **all** eligible 2018 US graduates who applied for a US postgraduate position, **90** percent obtained one at the time of graduation.

and 99% of GMCC students obtain Post Grad Placement.

95% PASS RATE FOR USMLE - students who took the USMLE 1 for the first time in 2017 achieved a 95 percent pass rate.

STATE REGULATORY BODY

- California Board of Medicine

FEDERAL REGULATORY BODY

- Department of Education

ADDITIONAL FEDERAL AGENCIES WE INTERACT

- Title IV of the Higher Education Act of 1965 (HEA)
- The Health Resources and Services Administration (HRSA)

ACCREDITATION BODIES GENESIS MUST COMPLY WITH

- National Committee on Foreign Medical Education and Accreditation (NCFMEA)
- Accreditation Commission on Colleges of Medicine (ACCM)
- Nederlands-Vlaamse Accreditatie Organisati (NVAO)
- Caribbean Accreditation Authority for Education in Medicine and other Health Professions (CAAM-HP).

Business Relationship

Our primary objective is to build partnerships in which we secure additional hospital host sites in highly desirable areas such as California and Florida. These sites must meet specific criteria such as, being an affiliate or sponsor of ACGME programs. Sites with Family Medicine ACGME listings are of the utmost value, as this allows GM-CC the ability to offer all six subject cores and countless electives within one geographic location.

Target Sites:

- ACGME Hospitals (Sponsors or Affiliates) of Accredited Residency Program
- Federally Qualified Health Center (FQHC)
- Indian Health Service (IHS) hospitals and clinics

The collaboration of organizations has the potential to establish GM-CC as a market leader in providing UME programs to International schools of Medicine. Our knowledge and experience at both the regulatory and hospital administration level opens opportunities that our client-schools alone could not exploit. This has been proven to be true at a number of our clinical sites.

Parameters and Milestones

Each year, one of our largest clients has nearly one-thousand 3rd year medical students rotating throughout the United States. GM-CC has had the capacity to host over two-hundred of those students. By working towards securing a variety of host sites, we can increase the number of rotations to over four-hundred slots, making GM-CC a potential acquisition target for any medical schools.

Fourth-year Students' first round match placements of students that attended 56 or more weeks of rotations at GM clinical programs

INTERNAL MEDICINE

The Internal Medicine clerkship at the clinical campus administered by Genesis Medicus (GM-CC) is a 12-week program during which students undertake clinical training at recognized teaching hospitals in California. Students rotate with dedicated clinical faculty at GM-CC host hospitals, clinics, and private practices.

The Internal Medicine Clerkship comprises of 6 weeks of general medicine, and subsequent specialties thereafter. Students rotate with faculty clinicians in inpatient and outpatient settings.

Teaching faculty physicians at the GM-CC clinical campus are Board Certified in their specialties of Internal Medicine, Pulmonology, Nephrology, Hematology/Oncology, Cardiology, Infectious Disease (including HIV medicine), Neurology and more.

Why choose GM-CC for your Internal Medicine Clerkship?

- Student/Faculty ratio as low as 2:1.
- Experience patient care in both inpatient and ambulatory settings.
- Rotate at teaching hospital host sites with prestigious academic affiliations.
- Weekly didactic lectures focused on preparing students to succeed on USMLE Step 2.
- Dedicated on-site administration for clinical student affairs.

For availability, or to schedule clerkships, please contact your school's advisor. For any questions pertaining to the structure and details of the rotation, please contact GM-CC.

“You learn from fantastic physicians who allow you to perform full H&P’s and practice SOAP (Subjective, Objective, Assessment and Plan).”

SURGERY

The Surgery clerkship at the clinical campus administered by Genesis Medicus (GM-CC) is a 12-week program during which students undertake clinical training at recognized teaching hospitals in California. Students rotate with dedicated clinical faculty at GM-CC host hospitals, clinics, and private practices. The surgery rotations will grant every student an excellent experience in general surgery, orthopedics, vascular surgery, and trauma. Students will participate in daily and weekly rounds and have the opportunity to be involved in the most challenging and complex surgical cases.

Why choose GM-CC for your Surgery Clerkship?

- Student/Faculty ratio as low as 2:1.
- Experience patient care in both inpatient and ambulatory settings.
- Rotate at teaching hospital host sites with prestigious academic affiliations.
- Exposure to a wide range of cases in the burn center, trauma and critical care units.
- Attend weekly didactic lectures focused on preparing students to succeed on USMLE Step 2.
- Dedicated on-site administration for clinical student affairs.

For availability or to schedule clerkships, please contact your school's advisor. For any questions pertaining to the structure and details of the rotation, please contact GM-CC.

"I had one-on-one interaction with preceptors...I was able to ask questions and get thorough answers from a reputable source, and the stuff they taught came up on the shelf exam."

OBSTETRICS/GYNECOLOGY

The Obstetrics & Gynecology clerkship at the clinical campus administered by Genesis Medicus (GM-CC) is a 6-week program during which students undertake clinical training at recognized teaching hospitals in California. Students rotate with dedicated clinical faculty at GM-CC host hospitals, clinics, and private practices. Students can expect to work with 7 to 10 patients a day and participate in deliveries over the course of their rotation. In addition, students will observe and assist faculty in labor and delivery and gynecologic surgical cases.

Why choose GM-CC for your OB/GYN Clerkship?

- Student/Faculty ratio as low as 2:1.
- Experience patient care in both inpatient and ambulatory settings.
- Rotate at teaching hospital host sites with prestigious academic affiliations.
- The opportunity to train with faculty during overnight labor and delivery shifts.
- Weekly didactic lectures focused on preparing students to succeed on USMLE Step 2.
- Dedicated on-site administration for clinical student affairs.

For availability or to schedule clerkships, please contact your school's advisor. For any questions pertaining to the structure and details of the rotation, please contact GM-CC.

"I had the wonderful opportunity to work with an obstetrician that had a very busy practice. I was able to observe several c-sections and natural deliveries over the course of a single week...an amazing learning experience."

PEDIATRICS

The Pediatric clerkship at the clinical campus administered by Genesis Medicus (GM-CC) is a 6-week program during which students undertake clinical training at recognized teaching hospitals in California. Students rotate with dedicated clinical faculty at GM-CC host hospitals, clinics and private practices. The rotation is divided into inpatient and outpatient components. Each student spends six weeks working with faculty in one of the GM-CC host hospital centers or their private practice. Students can expect to work with over 10 patients a day.

Why choose GM-CC for your Pediatrics Clerkship?

- Student/Faculty ratio as low as 2:1.
- Experience patient care in both inpatient and ambulatory settings.
- Rotate at teaching hospital host sites with prestigious academic affiliations.
- Exposure to a wide range of cases in Pediatric ED, ICU, and NICU.
- Weekly didactic lectures focused on preparing students to succeed on USMLE Step 2.
- Dedicated on-site administration for clinical student affairs.

For availability or to schedule clerkships, please contact your school's advisor. For any questions pertaining to the structure and details of the rotation, please contact GM-CC.

“Rotation provided good exposure for involvement in pediatric patient care. My attending genuinely cared about teaching students, helpful and considerate.”

FAMILY MEDICINE

The Family Medicine clerkship at the clinical campus administered by Genesis Medicus (GM-CC) is a 6-week program during which students undertake clinical training at recognized teaching hospitals in California. Students rotate with dedicated clinical faculty at GM-CC host hospitals, clinics and private practices. Students will rotate with primary care faculty who are solely dedicated to community and family medicine. Additionally, students will have the opportunity to participate in the most challenging and complex Family Medicine cases.

Why should you do your Family Medicine clerkship at GM-CC?

- Student/Faculty ratio as low as 2:1.
- Experience patient care in both inpatient and ambulatory settings.
- Rotate at teaching hospital host sites with prestigious academic affiliations.
- Exposure to a wide range of cases through the ED, Urgent/Emergent community- based sites and various hospital units.
- Weekly didactic lectures focused on preparing students to succeed on USMLE Step 2.
- Dedicated on-site administration for clinical student affairs.

For availability or to schedule clerkships, please contact your school's advisor. For any questions pertaining to the structure and details of the rotation, please contact GM-CC.

"My attending's practice was extremely busy and demanding, which exposes you to a high volume of work for someone who wants to go into primary practice."

PSYCHIATRY

The Psychiatry clerkship at the clinical campus administered by Genesis Medicus (GM-CC) is a 6-week program during which students undertake clinical training at recognized teaching hospitals in California. Students rotate with dedicated clinical faculty at GM-CC host-hospitals, clinics and private practices. Each student experiences six weeks of training with outpatient and in-patient attending physicians

Why should you do your Psychiatry clerkship at GM-CC?

- Student/Faculty ratio as low as 2:1.
- Experience patient care both inpatient and ambulatory settings.
- Rotate at teaching hospital host sites with prestigious academic affiliations.
- Exposure to a wide range of cases through the ED, Urgent/Emergent community-based sites and various hospital units.
- Weekly didactic lectures focused on preparing students to succeed on USMLE Step 2.
- Dedicated on-site administration for clinical student affairs.

For availability or to schedule clerkships, please contact your school's advisor. For any questions pertaining to the structure and details of the rotation, please contact GM-Clinical Campus.

"This rotation was a great learning experience...my preceptor was extremely patient and answered all of my questions."

ELECTIVES

Internal Medicine Sub I	Ophthalmology	Gastroenterology
OB/GYN Sub I	Surgery	Radiology
Pediatrics Sub I	Pulmonology	Geriatrics
Psychiatry Sub I	Maternal Fetal Medicine (MFM)	Rheumatology
Nephrology	Pediatrics	Anesthesiology
Cardiology	Pediatric Adolescent Medicine	Ear, Nose & Throat (ENT)

Simulation Labs

OVERVIEW

What is Medical Simulation Training?

Medical simulation training, simply put, replicates in-vivo cases in an in-vitro environment which includes training of life and death situations to produce the best outcome in real-life situations. Genesis Medicus-CC has partnered with Gaumard Scientific to provide training and practice for fledgling health professionals in gaining competency and confidence in working with real-life patients by practicing and working with responsive and dynamic simulation patients through the use of various bionic simulation models.

Specifically, medical simulation focuses on training objectives such as learning how to diagnose, treat, perform surgery and labor and delivery. Further, medical simulations may employ one or several of these elements to develop and deliver situationally appropriate training.

Diagnosing Illness: Before knowing how to treat an illness, a physician must first become aware of how to make a proper diagnosis. This includes a thorough patient assessment (obtain a proper history and physical), a strong understanding of all possible pathological options, deductive reasoning, and a determination of additional knowledge needed to make a diagnosis.

Prescribing Treatments: Learning how to prescribe appropriate treatments requires an understanding of pharmacology, non-pharmacological therapies, surgical options, illness subtypes, changes in the world of research, and what is most appropriate given the patient's socioeconomic status. Medical simulation can be used under these circumstances to give the physician the opportunity to treat a patient, then show the result of whatever regimen was chosen.

Surgical Procedures/ Labor and Delivery: Since these procedures typically involve an elevated level of risk, surgeons often experience many simulated surgeries before ever performing a real one. This allows the provider to practice the simultaneous management of sterile procedure, precise technique, proficiency with various instruments, and collaborating with the surgical team. In surgery, there is no replacement for practice, so surgical simulation is a great way to obtain experience in a manner that does not risk harming patients.

SIMULATION ROOMS

Genesis Medicus Clinical Campus, in partnership with Gaumard® Scientific, has developed a Simulation Lab model offering students a place to have the opportunity to develop clinical skills allowing them to experience true-to-life scenarios with realistic simulation patients, diseases, and equipment.

Seeing is believing . . . by integrating technology with the use of specialty mannequins, cameras, microphones and recordings for student observation and documentation. The level of sophistication in monitoring systems will influence instructor observation requirements.

In addition, to utilizing a realistic room configuration, Genesis Medicus utilizes Cardionics interactive auscultation simulator Clinical E-Scope® Electronic Stethoscope, a wearable simulation system. Programmed from a large library of cardiac, respiratory, gastrointestinal, and vascular bruit sounds, the E-Scope allows students the ability to auscultate a live acting patient with the sounds appropriate for the scenario. The upgraded Wi-Fi model allows parameters to be altered on-the-fly through the system's own network.

Group Activities

Patient interview
H&P Documentation
Group Discussion
Feedback from faculty

Pre-Lab

Students will be assigned a case study. Dr. Palana announces group assignment and give pointers on how to interact with patients.

Student Presentation

In the pictures, GM Student is giving weekly presentation on the difference between cardiac vs non-cardiac syncope

Lab Activities

GM Faculty will observe and assess student's performance in the sim room. The rest of the group can participate via camera in a separate room while waiting for their turns.

Post-Lab

Personal feedback on lab performance from GM faculty, follow by group discussion.

Simulation Lab Tour

Using HD cameras, Exam tables and medical equipments, we teach students practical skills, such as checking vital signs, inserting catheters and IVs

GAUMARD® SCIENTIFIC SIMULATORS

Gaumard® Scientific designs, manufactures, and markets simulation-based healthcare workforce training solutions for hospitals, universities, emergency medical services, and military services worldwide.

Gaumard® products are recognized worldwide for their innovation in simulation to empower healthcare with innovative training solutions designed to facilitate safe and effective training opportunities for healthcare students and professionals across nearly all clinical specialties, including pre-hospital care, trauma, nursing, obstetrics and gynecology, pediatrics, and surgery.

MIAMI, Sept. 9, 2021 – Newly Published Research Documents the Reduction of Medical Malpractice Claims Rates Following OB/GYN Training with Patient Simulators.

The retrospective analysis, by researchers at CRICO/Risk Management Foundation of the Harvard Medical Institutions, Brigham and Women's Hospital, Harvard Medical School, and the Center for Medical Simulation, was published in the peer-reviewed journal¹. The researchers called for continued simulation training for OB-GYNs.

OBSTETRICS & GYNECOLOGY PATIENT SIMULATORS

VICTORIA® simulates a full range of obstetrical events to facilitate teamwork and deepen critical thinking skills in learners of all levels. From early pregnancy complications, high-risk deliveries, and postpartum emergencies to non-gravid scenarios, developed from decades of obstetrical experience.

- Automatic visual object tracking and life like eye movements
- Fully programmable airway, breathing, and physiological circulation parameters
- True-to-life shoulder dystocia, breech, and C-section deliveries
- Supports real monitoring equipment: EKG, capnography, defib., NIBP, TOCO, and pulse oximeters
- Converts into a non-pregnant patient for gynecology training

Transition into the real world using real tools and monitoring devices. VICTORIA® supports the widest range of real patient monitoring equipment of any childbirth simulator, allowing participants to train using the tools they will use in real situations.

Newborn assessment and transitional care. VICTORIA® births a full-term baby of realistic size and weight designed to provide participants with the most realistic visual and tactile experience possible. VICTORIA's newborn has measurable vitals, which allow participants to perform a health assessment and determine if additional care is needed.

- Lifelike full-term baby of realistic size and weight
- Internal sensors record rotation of the fetal head and pull force in real-time
- Multiple programmable heart and respiratory sounds and heart rate types
- Anatomical landmarks include palpable fontanelles and sutures

NEWBORN PATIENT SIMULATORS

SUPER TORY® True-to-life neonatal resuscitation and stabilization scenarios.

- Programmable mouth, eyes, and limb movement
- Dynamic lung compliance with true ventilator support
- Real patient monitor support: pre- and post-ductal SpO₂, EKG, capnography, NIBP, live pacing and defibrillation
- Infusion and sampling: scalp, hand, umbilicus (UVC/UAC), and IO access
- Crying and grunting
- Dynamic lung compliance
- Heart and lung sound and palpable pulses

A leap in NICU simulation. The breakthrough respiratory system design in SUPER TORY® accurately responds to mechanical ventilation support like a real newborn, while making it possible to adjust pulmonary function on the fly. Advanced features allow SUPER TORY® to simulate the course of respiratory disease through treatment, weaning, and rehabilitation with the highest degree of physiological accuracy.

- Modes supported include ACV, SIMV, CPAP, PCV, PSV, NIPPV
- Programmable respiratory patterns, retractions, "see-saw" breathing, and abdominal distension
- Supports therapeutic levels of PEEP
- Programmable airway and lung function
- Dynamic lung compliance

SUPER TORY® was developed for in-situ training. Real patient monitoring support allows participants to set up and operate real equipment, interpret real-time data, and follow protocols just as they would in real situations.

NEONATE PATIENT SIMULATORS

Premie HAL® is a lifelike, 30-week preterm patient simulator designed to facilitate the training of residents and health care professionals in the areas of preterm airway management, resuscitation, stabilization, transport, and intensive care.

Real-time CPR quality feedback and performance reports. eCPR™ sensors inside Premie HAL® capture ventilation and compression quality metrics in real-time, allowing educators to identify and address gaps in performance with greater efficacy.

- Compression depth, rate, and interruption duration
- Ventilation rate and duration
- Smart CPR voice coach
- Performance report summary

The unique challenge of pre-term airway management. Developed using the latest laser and 3D printing technology, Premie HAL® presents participants with the most accurate airway anatomy available. High anatomical accuracy ensures participants can use standard airway intubation devices to develop technique and fine motor skills.

Real mechanical ventilation. Real feedback. Premie HAL® features compliant lungs that produce realistic PV waveforms on real mechanical ventilators and other respiratory equipment. This allows participants to follow guideline-recommended settings and algorithms while developing skills more directly transferable to real situations.

PEDIATRIC PATIENT SIMULATORS

Pediatric HAL® the world's most advanced pediatric patient simulator and the first capable of simulating lifelike emotions through dynamic facial expressions and speech. Pediatric HAL® supports a broad range of real patient monitors and sensors. This unique capability allows participants to practice setting up and operating equipment just as they would in real situations.

- Interactive eyes and active facial expressions
- Dynamic lung compliance with true ventilator support
- Real patient monitor support: SpO2, EKG, capnography, NIBP, live pacing, and defibrillation
- Emergency intervention: surgical airway, needle decompression, chest tube insertion
- Glucose meters

HAL® is designed to help providers develop the specialized skills needed to effectively communicate, diagnose, and treat young patients in nearly all clinical areas.

Through scenario-based learning, HAL® can help participants assess verbal and non-verbal cues to build patient-provider communication skills and empathy. HAL® also simulates a variety of common emotional states to better approximate behavior.

True mechanical ventilation support for advanced respiratory care simulation.

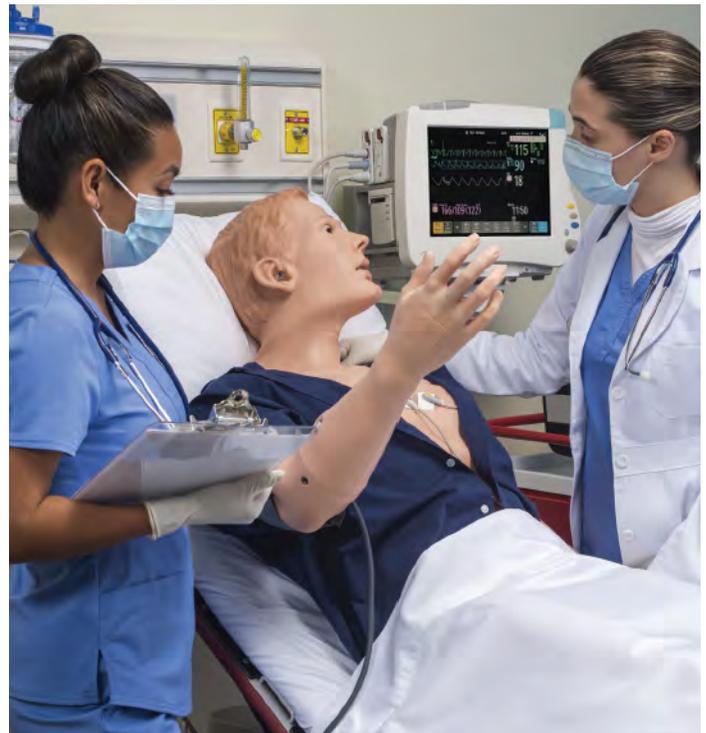

- Programmable respiratory patterns
- Supports therapeutic levels of PEEP
- Dynamic lung compliance

ADULT PATIENT SIMULATORS

HAL® is an advanced multipurpose patient simulator specifically designed to simulate lifelike cases across a broad range of clinical areas including prehospital, ED, OR, ICU, PACU, med-surg, and more.

- Programmable airway and lung compliance
- Myocardial infarction modeling
- Automated physiology and drug recognition
- Real monitoring: mechanical ventilators, 12-Lead ECG, AED, oximeters, capnometers, and blood pressure cuffs
- eCPR™ - effectiveness monitoring and training
- 50+ drug library and pharmacology editor
- motion training

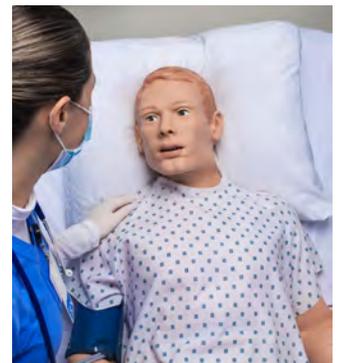

HAL's physiological features allow learners to monitor and manage an infinite number of simulated conditions using real tools and medical devices.

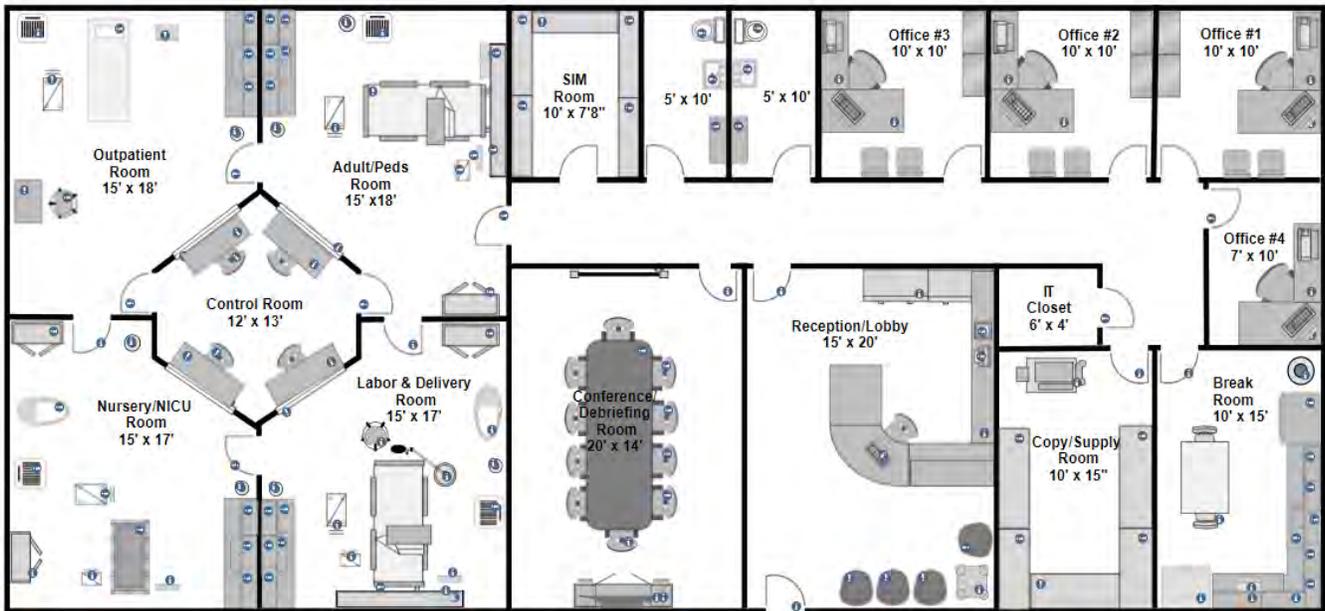

Train oral or nasal intubation:
ETT, LMA, King LT, tracheostomy,
and needle cricothyrotomy.

Attach real electrodes, pads,
or paddles and monitor HAL's
lifelike rhythm in real-time.

Mission Community Hospital has been providing high-quality healthcare in the San Fernando Valley community for more than 50 years. Mission Community provides a full range of medical, surgical and mental health care, including 24-hour emergency services.

Mission Community is licensed for 85 medical/surgical beds, 10 critical care beds plus an additional 60 beds for psychiatric care. Fully accredited by The Joint Commission, our hospital is licensed to participate in the Medicare and Medi-Cal programs. Additionally, Mission Community is a designated California Disproportionate Share Hospital, and majority of our services are provided to Medicare and Medi-Cal beneficiaries.

Hollywood Presbyterian Medical Center

"Our staff relentlessly strive to provide the safest care you need in our safe, healing environment."

Address: 1300 North Vermont Avenue,
Los Angeles, CA 90027

Contact: (213) 413-3000

Email: StudentCoordinator@GenesisMedicus.com

CHA Hollywood Presbyterian Medical Center has been caring for the Hollywood community and surrounding areas since 1924. The hospital is committed to serving our local multicultural communities with quality medical and nursing care. With more than 500 physicians representing virtually every specialty, CHA Hollywood Presbyterian Medical Center is ready to serve the medical needs of you and your loved ones. We strive to distinguish ourselves as a leading healthcare provider, recognized for providing quality, innovative care in a compassionate manner.

A leader in bio-medical research, CHA Bio Group is at the forefront of research on cell, gene, and epigenetic development through resource acquisition for future medical use in treatment of incurable diseases, while fostering the next generation of medical professionals. The group has developed an international reputation for its world-class health treatments and advances in reproductive medicine. What differentiates us as a global leader is our strong ecosystem based on the collaboration of university, research institute, hospital network, and bio companies which enables us to accelerate research and development and successfully realize new business opportunities.

This massive teaching site offers virtually every service required for any person- Newborn, Child, Young Adult, Adult and Elderly. HPMC is a full-service medical center.

LADMC HOSPITAL

LADMC LA DOWNTOWN
MEDICAL CENTER
HOSPITAL & 24 HOUR URGENT CARE

“We provide care for culturally diverse population at two campuses in LA County”

ADDRESS: 1711 West Temple Street,
Los Angeles, CA 90026

Contact: (818) 923-1085

EMAIL: StudentCoordinator@GenesisMedicus.com

LAMDC hosts 269 inpatient hospital beds provide care for a culturally diverse population at two campuses in Los Angeles County.

The Downtown Campus is a welcoming community hospital committed to training Physician and Nurses. Located at the intersection of three of Los Angeles’ oldest neighborhoods - Historic Filipino Town, Echo Park, and Silver Lake.

The Ingleside Campus was established in 1918 in the San Gabriel Valley. It is one of the first licensed psychiatric facilities in California. This campus provides an optimal setting for treatment and opportunities for therapeutic outdoor activities. The dedicated team is committed to providing safe, compassionate, and supportive care to our patients.

PIH Health Good Samaritan Hospital

"Providing quality care and outstanding services for our member in the downtown LA communities and surrounding areas for over 20 years."

ADDRESS: 1225 Wilshire Boulevard,
Los Angeles, CA 90017

CONTACT: (818) 923-1085

EMAIL: StudentCoordinator@GenesisMedicus.com

PIH Health Good Samaritan Hospital has been meeting the healthcare needs of the Los Angeles community since 1885. It was originally known as Los Angeles Hospital and it wasn't until 1986 that the hospital changed its name to Los Angeles Good Samaritan Hospital. In 1898, it became a training school for nurses and continued its commitment to education with on-site training programs for both nurses and doctors. The current hospital building opened in 1976 and has over 400 inpatient beds. By joining PIH Health in 2019, it officially changed its name to PIH Health Good Samaritan Hospital.

The PIH Health Family Medicine Residency Program is an unopposed program that serves the communities of Los Angeles & Orange counties as well as the San Gabriel Valley. Our mission is to provide students and residents with a rich, broad-based, and multidisciplinary graduate medical education that is built on a culturally competent foundation. Our residents provide medical care to underserved socio-economic populations and multi-cultural communities where they establish their roles as community health providers. By presenting our residents with these targeted and fundamental learning experiences throughout their training, we aim to guide and inspire them to continue to provide the same type of outreach and medical services in similar communities upon graduation.

Our program offers an exemplary model of working as a member of a collaborative healthcare team that includes hospital and ambulatory specialists, physician assistants, nurse practitioners, social workers, behavioral scientists, and community partners. Our learners work directly with attending physicians in numerous specialties, allowing for exceptional and personalized training opportunities.

PIH Health Downey Hospital is a non-profit, community hospital serving Downey and its surrounding cities with 199 beds. The emergency room is very busy with approximately 56,000 patients per year. Our hospital services include:

- Intensive Care Unit
- Labor & Delivery
- Inpatient and outpatient operating rooms
- Interventional Radiology
- Radiology Department
- GI Lab
- Cardiac Critical Care Unit
- Telemetry
- Cardiac Cath Lab
- Medical-Surgical
- Pathology
- Emergency Department

The residency program at PIH Health Downey Hospital originally began in 1993 as part of Rio Hondo Hospital which then moved to Downey Community Hospital and later became Downey Regional Medical Center. In 2013, PIH Health acquired Downey Regional Medical Center and renamed it PIH Health Downey Hospital. Our program is an AOA/ACGME accredited Osteopathic Family Medicine Residency with a strong emphasis on teaching.

Information Provided by The Program

Modesto hosts one of the 7 U.C. Davis family medicine residencies. The Valley Family Medicine Residency of Modesto builds on a 35-year tradition of training family physicians for California's Central Valley. We are a health safety-net integral to our community's medical system. We are sponsored by the Valley Consortium for Medical Education, a coalition of the community stakeholders committed to our funding. Join us for broad-based training in an environment of educational innovation.

EMANUEL MEDICAL CENTER

"Emanuel Medical Center. Our community is built on care."

ADDRESS: 825 Delbon Ave, Turlock, CA 95382

CONTACT: (209) 667-4200

EMAIL: StudentCoordinator@GenesisMedicus.com

Since 1917, Emanuel has been the heart of healthcare in Turlock, California, providing incredible high-quality care with compassion to the patients we serve. At its fundamental level, we know a hospital is a medical facility. But Emanuel Medical is more than a medical facility, we are a community resource that tries to help people live better, healthier lives.

At Emanuel Medical Center, our family of nurses, doctors, staff and healthcare specialists are dedicated to providing expert, compassionate care for all the families of Turlock and the surrounding communities since 1917.

Caring, nurturing and helping heal friends, loved ones and neighbors of Turlock is our passion.

From emergency services and heart care to orthopedics, advanced stroke treatment and more, we're focused on providing you with expert care combined with a healthy dose of attentiveness and kindness.
